## IDRARESIN NDM 18

### *ACRYLIC RESIN IN ORGANIC SOLVENT*

#### **APPLICAZIONE**

---

**IDRARESIN NDM 18** is an acrylic resin in organic solvent particularly suitable for indoor and outdoor concrete surfaces thanks to its excellent resistance to light. Thanks to the particular formulation, the solution penetrates the concrete and, even on old floors, re-gives a brilliant appearance by increasing the physical and chemical properties of the surface.

**IDRARESIN NDM 18** can be used on printed floors by "toning" the color making it brighter also makes the surface easier to clean; on industrial floors it acts as dustproof and stain-resistant.

#### **USO**

---

**IDRARESIN NDM 18** The product is ready to use, and can be applied by brush roller or airless pump. As a first application, two hands are suggested, the first penetrates the support consolidating it, the second instead remains more on the surface increasing the brilliance. Years later (depending on traffic) a further one-hand application will be necessary to regenerate the original brilliance.

The surface to be treated must be perfectly clean without oil stains and stains in general and if it turns out to be too "closed" it is advisable to sand or treat the support with mild acid and rinse thoroughly. The product should be applied on a dry surface without moisture, so if outside, it is not recommended to use it in wet periods or with the possibility of rain within 48 hours.

The floor is walkable after 24 hours but it is suggested to use it after 48 hours. The yield is a function of the support, on printed floors it is about 3.5 square meters per liter for applications in two hands, on industrial flooring, the yield increases according to the porosity of the surface reaching even 7sqm per liter.

## DATI CARATTERISTICI

---

ASPECT	: Clear liquid free of suspended solids
SOLIDS CONTENT	: ca. 18%
pH	: Solvent
STORAGE	: Immediately close the containers after use.
NOTE	: PROFESSIONAL USE ONLY
